State inspector of coal mines reports

Section 98, Pages 2911 - 2940

These reports of the Kansas State Mine Inspector mostly concern coal mining, though by 1929 the scope of the reports broadens to include metal mines. The content of individual reports will vary. The reports address mining laws and mining districts; industry production and earnings; fatal and non-fatal accidents; accident investigations and transcripts of oral interviews; labor strikes; mine locations; mining companies and operators; and proceedings of mining conventions. The reports document the political, economic, social, and environmental impacts of more than seventy years of mining in southeastern Kansas.

NEW MINES SUNK IN KANSAS DURING THE YEAR 1920.

During the year 1920 several new mining operations were begun in Kansas. The most important of these operations are mines Nos. 16 and 18 of the Sheridan Coal Company in Crawford county. In Linn county two new mines began operating during the year 1920—the Linn County Coal Company mine and the Kaw Valley Coal and Mining Company mine.

Mine No. 16 of the Sheridan Coal Company is located in section 9, township 28, range 25, two and one-half miles northwest of Gross, in Crawford county, Kansas. This shaft is 110 feet deep and the coal averages 32 inches in thickness. Development of this mine was not begun until January, 1921, due to some difficulty in getting railroad connections to the mine, although sinking was begun in August, 1919. This is expected to be one of the largest producing mines in the state, and the mining operations will extend over 920 acres of land. The expected life of the mine will reach about 16 years.

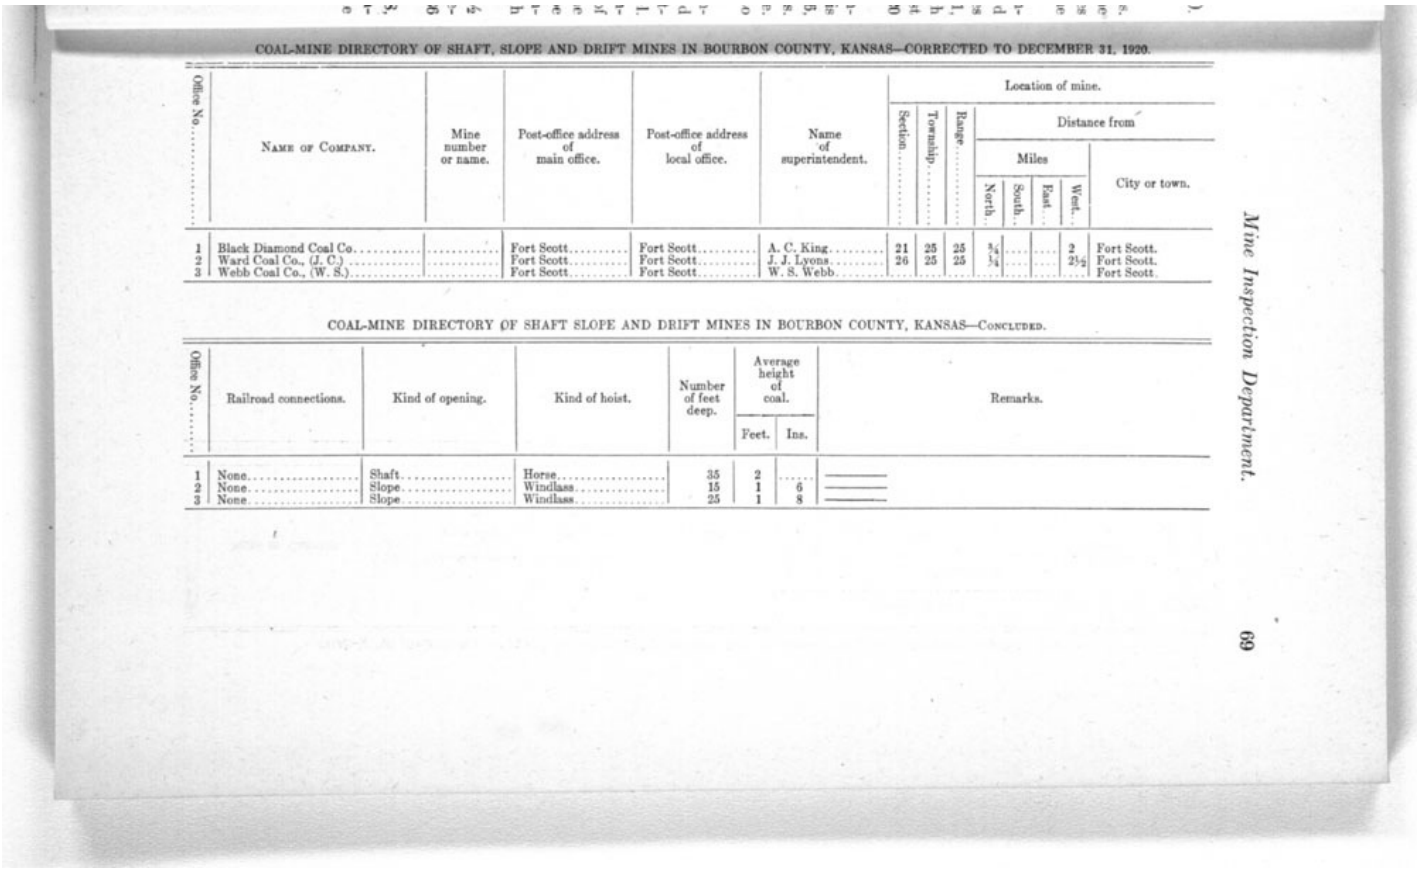

Mine No. 18 of the Sheridan Coal Company is located in section 31, township 29, range 25, one and one-half miles north of Arma. The sinking of this mine was begun January 18, 1920, and development work started January 6, 1921. This mine is 236 feet deep and the coal averages 36 inches in thickness. This mine will be one of the most modern and up-to-date mines in the state. The operations will extend over 1,120 acres of land and it is calculated to work about 20 years.

Modern equipment has been installed throughout in these mines, and nothing has been left undone to make them two of the most up-to-date and largest producing mines in the state. Both mines are equipped with first-motion steam engines. The tipple at mine No. 18 is constructed of steel. Mine No. 16 will be ventilated with a Jeffrey fan. Mine No. 18 will be ventilated with a much larger fan—a Buckeye blower fan having a capacity of 148,000 cubic feet of air per minute, with a 2½-inch water gauge. With the ventilating equipment that is being installed at these mines they should be well ventilated at all times. Mr. E. M. Roberts, superintendent of this company, is a veteran mining man and is known to be one of the most thorough and practical mining men in the state.

Mine No. 1 of the Kaw Valley Coal and Mining Company is located 3½ miles Southeast of La Cygne, in Linn county, Kansas. This mine began developing about October 1, 1920. It is 50 feet deep and the coal averages 36 inches in height.

Mine No. 1 of the Linn County Coal Company is located in section 28, township 29, range 25, 2½ miles northeast of Pleasanton, in Linn county, Kansas, and has railroad connections to the Missouri Pacific railway. This mine is 42 feet deep and the coal averages 30 inches in thickness.
