

Reports of the Kansas State Board of Agriculture

Section 194, Pages 5791 - 5820

These reports by the State Board of Agriculture include the proceedings of the board, reports for the previous year, maps of counties, abstracts of counties, miscellaneous articles, and reports of agricultural societies, the state fair, state and county statistics, agricultural industries and products, the agricultural college, and the Kansas Academy of Science. The annual reports began in 1872 and were succeeded by biennial reports beginning in 1877-78. Volume numbers were discontinued with the 1953-1956 report; the last being volume 44. From 1953 to 1976 the reports drop "biennial" from the title. Annual reports begin again from 1976 to 1984, except 1982-1983 which is biennial. The dates for each report reflects the reporting year and not the publication date, which was usually a year later. The title of each report reflects the form given on the title page. Only volumes 1 (1872), 2 (1873), 3 (1874), 4 (1875), the centennial edition (1875), 5 (1876), 6 (1877-1878), 7 (1879-1880), 10 (1885-1886), 11 (1887-1888), 13 (1891-1892), and 14 (1893-1894) are currently available.

Creator: Kansas State Board of Agriculture

Reports of the Kansas State Board of Agriculture

KANSAS STATE BOARD OF AGRICULTURE. 478 A few scattering trees are met with along Rattlesnake creek, the amount of timber in the county being inconsiderable; cottonwood is the principal variety found. A salt marsh of considerable size is found in the northeastern corner of the county, covering a large portion of Sections 30 and 31 in Township 21, Range 11, and Sections 5, 6, 7, and 8 of Township 22 in the same Range. There are several salt springs. and some fresh water springs serving as feeders to this marsh. The water of the Rattlesnake creek is salt, from being supplied by salt springs, and along this stream, salt water in wells is a common occurrence. The county is not well supplied with water courses. Rattlesnake creek enters the county at the southwestern corner, and, flowing northeast, leaves it, on the east, two miles south of the northeastern corner, and becomes tributary to the Arkansas river in Rice county. Reports of the Kansas State Board of Agriculture

KANSAS STATE BOARD OF AGRICULTURE. 482 corner of the State, on the Colorado border, and in the second tier of counties north from the Indian Territory. In point of population it ranks as the one hundred and fourth, and has a density of 3.29 people to the square mile. Johnson City, situated in the center, is the county seat. The surface of the county is generally level, being slightly undulating in some places. Bottom-lands average one-half of a mile in width, comprising but a very small proportion of the total area. Bear creek flows across the county in a northeasterly direction, and a branch of the North Fork of the Cimarron river across the southern portion from west to east. Magnesian limestone is found in the southwestern portion, and gypsum along the FARM AND CROP STATISTICS. Table showing acres, product, and value of field crops in the county for the year 1888. 1888 CROPS. Product. Value. Acres. 62,395 49,916 00 12,479 Barley

Reports of the Kansas State Board of Agriculture

490

KANSAS STATE BOARD OF AGRICULTURE.

The general surface is a gently undulating prairie, having the appearance in many places of being nearly level. Bottom-lands average a width of two and one-half miles, and comprise 20 per cent. of the total area.

Timber belts on the streams are from five rods to one-half mile in width; the following are the principal varieties of trees: Cottonwood, willow, ash, box-elder, red and white elm, hackberry, burr-oak, mulberry, coffee-bean, blue ash, and honey leavest

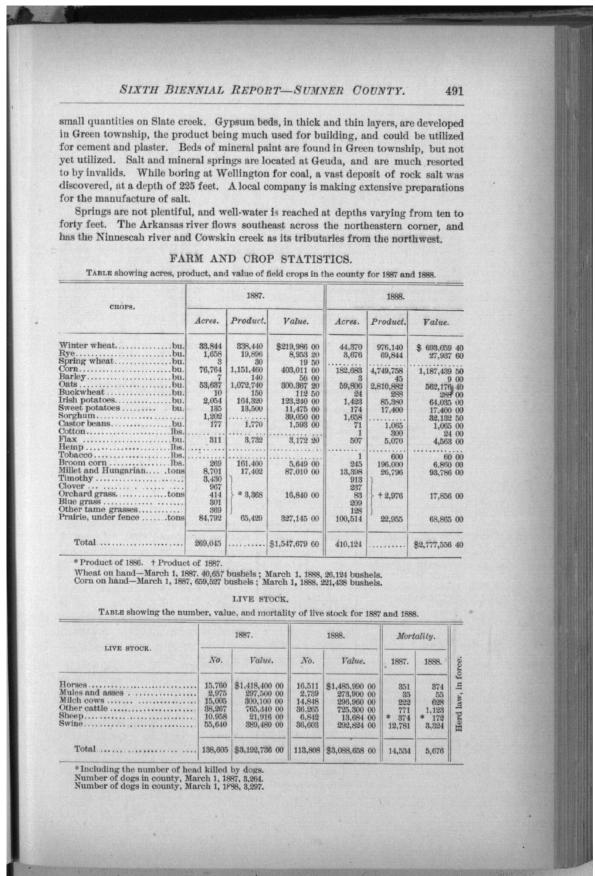

POPULATION, VALUATION, AND INDEBTEDNESS.

Table showing total population, by townships and cities, for 1887 and 1888, and the assessed valuation and indebtedness of the county, total school district indebtedness, and the assessed valuation and indebtedness of the municipal townships, for 1888.

A thin stratum of bastard limestone is found only in the highest ridges. There are two quarries, twelve miles southeast of Wellington, that produce a very fair quality of marble. Lime and sandstone are found in many parts of the county, but in small quantities, and of an inferior quality. Fire-clay is found at a great depth in the southeastern portion of the county. An inferior quality of potter's clay exists in
