D.R. - 3 Livestock - Pasture - Feed Reporting Service

To County Agricultural Agents:

A great many of you have not submitted the names of your county and township representatives for the Livestock Drought Relief Work. Please send the list of your county organization at once.

In addition to pasture and feed, this report contains a supplementary list of available seed which has come to this office since our report of June 13.

Very truly yours

FOR IMMEDIATE RELEASE:

SPECIAL TO:
Kansas Weeklies

RAINFALL OF LAST WEEK PROMISES BETTER FEEDS

Manhattan, Kan., June 00-A telegraphic report, received by the Kansas State College extension service, June 18, from 55 secondary drought counties, stated that 34 counties had shown decided improvement in crop conditions due to rainfall during the preceding five days.

Forty-five of the counties reporting had received 1 inch, or more, of rainfall during the period from June 13 to 18. Rooks and Russell Counties received the most rain, reporting between 2 and 6 inches. The report was decidedly optimistic with only 8 counties reporting no improvement and 13 reporting slight improvement.

Gounties which reported less than 1 inch of rainfall during the five days preceding the report are Doniphan, Jackson, Marshall, Logan, Clark, Grant, Haskell, Hodgeman, Kearny, and Morton.

The following are the details of the report received here Monday, June 18, in reply to a questionaire sent out by the extension service. This report is a part of the state-wide drought relief service which has been established by the extension service.

Dean H. Umberger COLLEGE

Dear Dean Umberger:

In regard to the seed wheat situation. The best reports we can receive out of the southwest indicate that practically all of that section will produce their own seed wheat. There will be plenty produced. It may take some little shifting but most of the elevator men seem to think they can handle the situation. I am enclosing copy of a letter from Mr. Clyde Morton, Manager, Farmers Cooperative Commission Company of Hutchinson.

At the conference at Widhita, Mr. Snyder indicated they were willing to loan what they could on this wheat, but they preferred loaning to the regional as the Farmers Cooperative Commission Company or to the Farmers Union Jobbing Association, and not to the local.

Apparently there are about three or four counties in the northern part of the state who will need some assistance and wheat shipped in for seed, i.e., Sheridan, Graham, Rooks, Osborne. Probably Osborne county can care for themselves. There are two good large elevators in Osborne County, and Mr. Snyder said he would loan to the Farmers Union Jobbing Company if they wanted to fill them.

Sheridan and Graham counties each have houses owned by the Farmers National Grain Corporation, who will be able to hold wheat in that territory until after seeding time without much cost.

The difficulty in handling this where the wheat has to be shipped in is the billing that has to be killed. Wheat is purchased west of a station on basis of Kansas City less freight shipped east, and if trucked out of the storehouse, freight bill is lost. On local wheat this could be handled without trouble because of no billing behind it.

In most of the state there seems to be this feeling, that if there is something to use as money there will not be much trouble encountered in obtaining wheat.

I am enclosing copy of summary up to date. The last column on this does not mean that seed wheat will be needed, but does mean if the local association is to hold wheat, they will have to have financial assistance.

Very truly yours

Governor Alfred M. Landon drought correspondence

June 14, 1934

Vance M. Rucker Extension Economist Kansas State College Manhattan, Kansas

Dear Mr. Rucker:

As I wrote you last week, I intended to make a trip over the territory and to give you a reply upon my return.

From my observations and from contact with the managers over the territory west of Dodge City through Minneola to Plains, north to Satanta down to Elkhart, up to Johnson and Syracuse and back to Dodge City and on in, I find that there will be sufficient wheat raised for seeding purposes over this entire territory.

There no doubt will be a few farmers who will not raise their seed but there wil be others in the same neighborhood who will have more than they will require. In my opinion, however, there will not be a lot of these as a lot of this ground will produce some two or three bushels to the acre and believe they will go out and cut these patches and salvage what little they can for seeding purposes.

The boys all feel there is nothing alarming over the seed situation. It is true that if they ship out too much of what they raise, that it might make it just a little difficult, but they say most of the farmers are going to try and hold back some wheat and they will try and hold back a little also.

At a meeting held in Satanta, Dodge City, and Fratt, of managers in their respective areas, it was suggested that a request be made to the Government to allow those farmers having crop production loans to deduct one bushel per acre covering their allotment acres, for seeding purposes.

We understand the Production Credit Association is making some move along similiar lines. These of course would only take care of the farmers having crop production loans or loans through the Production Credit Association. We think something along this line would be more advisable than to have the elevator boys store their wheat up and hold it. It is true, they could hedge it, but we think this not a very good practice to recommend them getting into.

We are having a nice business in old wheat but have had very little new wheat in up to this time. We had two cars in from Moscow which was surprisingly heavy in test weight, being 61.5#, 13.50% and 14% protein. Samples mailed in from Fowler, Minneola and Plains went 16% to 17%, and around 13% and 14% on Dodge City samples this way.

It looks like the mills are going to be strong competition in the market for this short crop.

Yours very truly

THE FARMERS COOPERATIVE COMMISSION COMPANY

H. C. Morton Manager

Governor Alfred M. Landon drought correspondence

Topoka, Kansas June 16, 1934

At a conference held in the office of Governor Landon, Topoka, June 15, 1934, at which the following were present:-

Alf M. Landon, Governor
J. F. Stome of the Federal Relief Administration, Washington, D. C.
John G. Stutz, Emergency Relief Administrator
H. Umberger, Dean of Extension Division, Kansas State College
G. R. Atherton
Lee Larrabbe
Lekin Neede

M. G. Strong, State Fish & Game Warden
Geo. S. Knapp, Chief Engineer, Division of Water Resources, State
Board of Agriculture
Murray A. Wilson, Engineer, Forestry, Fish & Game Commission
J. C. Mohler, Secretary, State Board of Agriculture
Cal Mard, State President, Farmers Union
Walter Innes, Chairman, State Planning Board
Sem Wilson, Secretary, State Planning Board
Louis Williams) Extension Division of the Kansas State College
A. F. Turner
Mrs. W. G. West, Kansas Livestock Commission

the possibilities of water storage in the State of Kansas were discussed at length along the following lines:

- A. Garden pends or pends to be filled from wells for lawn and garden irrigation.
- B. Farm ponds
- C. Dams for the creation of lakes of from 100 to 400 acres in surface erea.
- D. Storage reservoirs
- E. Overflow or low-water dans on running streams.

A. Garden Ponds

In a large portion of the more arid sections of the state, the raising of gardens, trees and lamma is impractical without the aid of irrigation. Over much of this territory sufficient water can be obtained from wells with windmills to supply this type of irrigation. One well and windmill will usually supply enough water for the proper irrigation of about one acre of land, if suitable storage is provided. The amount of storage required per well is approximately 1,000 barrels. This can be obtained by constructing an earthen pland 80 feet in diameter and three feet in depth. A suitable outlet pipe should be provided to allow water to be drawn from storage for irrigation.

B. Farm Ponds

over a large portion of the state, the topography is such that the construction of small earth dams will create pends of from five to thirty acres in surface area. A large number of these pends will be of real benefit to this state and to the Mississippi River system beyond the confines of the state, as they store water during storms, provide stock

Governor Alfred M. Landon drought correspondence

2

water, raise the ground water level and tend to equalize the extremes of high and low stream flows to which the streams of Kansas are now subjected with great loss from floods and bad sanitary conditions on the streams during periods of deficient stream flow.

The number of such pends which could be economically constructed in all parts of the state is estimated conservatively at 50,000. The average total cost of such dens may be estimated to be \$1,500 of which 30% or \$450 would be necessary to pay for materials, equipment rental and engineering and the balance for labor and team hire. If all labor and team hire is provided for, all other expenses should not exceed \$450, to \$500 per dam.

C. Lakes of 100 to 400 acre surface area

There are numerous sites in the state where larger dams could be constructed, creating lakes of from 100 to 400 acres in size. These lakes would be of value for water storage, stream flow regulation, fish culture and public recreation. Past experience had demonstrated that such structures cost from \$500 to \$900 per acre of surface area or an average of about \$700. Of this amount 20% is for direct labor, 15% for materials, 10% for engineering and 35% for equipment rental and applies and 20% for land and right of way.

At least 90 out of the 105 counties has one such site and many of them have three or four. It is safe to conclude that there are 200 such sites which could be developed. After completion these lakes and lands would be maintained by the state and administered as public recreational grounds for the benefit of the public.

D. Storage Reservoirs

On major streams of the state, there are numberous sites which could be developed as major storage and lake projects. From all the possibilities there could be designed a correlated system of reservoirs on each stream.

Such reservoirs might be expected to store from 100,000 to 1,000,000 acre feet of water and to cost in the neighborhood of \$2,000,000 each. Of this amount 12% would go to direct labor, 15% for materials, 7% for engineering and supervision, 40% for equipment and machinery, and 25% for land and right of way. It is estimated that there are 20 such sites which could be developed to the ultimate benefit of the state and nation.

Governor Alfred M. Landon drought correspondence

E. Overflow Dams

Overflow dans are practicable only on the smaller streams which flow nearly all the year round. Maintenance costs are high and the locations where such construction is practical are comewhat limited. Types will vary with the location, but based on an average height of 8 feet and a length of 150 feet, the cost is estimated at \$7,000 each, of which \$2,000 will go to direct labor, \$3,500 for material, \$500 for engineering and \$1,000 for equipment rental. It is estimated that there are 100 sites where this type of construction night be advisable.

Summary

Туре	Lab	or-	Other Cests	Total
Cardon 1	Ponds			
50,000	farm ponds	52,500,000	22,500,000	75,000,000
200 - 20	00 acre Lekes	12,600,000	29,400,000	42,000,000
20 store	age reserv	oirs 5,000,000	35,000,000	40,000,000
100 over	rflow dama	200,000	500,000	700,000
		70,300,000	87,400,000	157,700,000

He cost item is included for the garden pends because they are largely personal matters which, in the case of those already on the relief rolls, can be taken care of in the regular way through the relief, administration. The labor on the farm pends might be furnished in large part by the landowner and his neighbors, but in connection with the construction of such a vast number of dams it should be clearly borne in mind that in many instances farmers will be unable to spare sufficient time from their own farm operations to complete a dam of this kind. In addition to furnishing engineering, material and equipment hire and supervision, it may be necessary in many instances to supply part of the labor, which possibly can be obtained from the relief rolls in the county. Supplying some labor can be justified since broadly speaking the public interest in the construction of such pends is greater than the private interest of the owner.

Probably the most difficult phase of such a program will develop in getting the vast amount of work under way quickly and administering it efficiently. Kansas is fortunate in having a department already organized and functioning, accustomed to just this type of work. The Forestry, Fish and Game Commission which has the power to eminent demain to secure lands and right of way can assume the administration of the proposed work with a minimum of lost time and wasted effort and carry the program to completion.

Livestock - Pasture - Feed Reporting Service

To County Agricultural Agents:

Effective with this report we shall endeavor to keep you posted as follows:

 Available pastures and feed in surplus counties.
 Livestock owners who will have to move livestock out of drought counties.

The 55 drought counties will be interested in pastures and feed. I would suggest that you advise your farmers to inspect the grass and water conditions, as well as dealing directly with the owners in making the pasture rental contract.

The 50 counties outside the drought area, referred to as surplus counties, will have the location of the owners of livestock, that reports to date indicate will have to be moved. I would suggest that your pasture owners deal directly with cattle owners.

All of this data, including the available seeds will be reported through your office. This information is being assembled from your reports, thus, it is necessary that you keep us informed of all conditions.

HU HJ:MJ

Very truly yours, Director.

Governor Alfred M. Landon drought correspondence

KANSAS STATE COLLEGE
OF AGRICULTURE AND APPLIED SCIENCE
Division of Extension
Office of Dean and Director
Manhattan, Kansas

June 12, 1934

COPY FOR YOUR INFORMATION:

To Agricultural Extension Specialists,
District Supervisors,
County Agricultural Agents,
Assistant County Agents, and
Emergency Agricultural Assistants:

Director C. W. Warburton has called to attention a circular G-11, "The Most Complete Agricultural Recovery in History," by Dr. Frederic G. Howe, Consumers' Counsel of the Agricultural Adjustment Administration, Washington, D. C.

This circular outlines the steps that Denmark took to change that country from a condition of economic ruin to one of economic well-being, and compares the situation of the farmer in Denmark with that of the farmer in the United States. I am inclosing a copy of the pamphlet.

Very truly yours

Director.

June 12, 1934

Governor Alf M. Landon Topeka, Kansas

Dear Governor Landon:

After writing you this morning we have had a further conference of those in the Extension Division who are in a position to know the drouth situation in various parts of the state. We are today asking every county agent to inform us by wire of the name and address of any owner of cattle in distress, giving the number that are and that will be in distress in five days. My purpose is that we may be informed and may determine when we should request the classification of any county in Kansas as an emergency drouth area.

As I explained last Saturday, the county agents were to return to their counties at the end of last week after spending 4-H Club Week here at Manhattan and immediately proceed to the organization of township and county committees, these committees to fill out a questionnaire indicating the situation with respect to needs for or supplies of feed, pasture, and water.

In addition, Mr. Stutz has selected Mr. Archie Glenn and Mr. O'Hara, each a graduate of this institution with western Kansas experience, one to keep informed regarding conditions in the northern half of the state and the other in the southern. Also, Mr. Stutz has placed Mr. Jackson here whom we will use to supplement our regular staff and for any exigency which may occur.

I am sending you a map upon which are designated the counties subject to various agricultural adjustment drouth regulations and which are classified as secondary drouth counties by the Agricultural Adjustment Administration.

It seems to me that this plan should adequately handle any situation and in instances where individuals or organizations report serious situations, if requests are referred to us I believe we can investigate the case within five hours after the report is received here.

We have not as yet seen fit, from any reports we have, to classify any county as an emergency drouth county. The reports which should be available within the next few days should give us sufficient information to determine if and when any county in Kansas should be designated as an emergency drouth county.

I will be glad to get any suggestions which may occur to you.

Yours very truly,

Direct

June 12, 1934

Governor Alf M. Landon Topeka, Kansas

Dear Governor Landon:

Just a personal note inspired by yours of June 9 to the President of the Chamber of Commerce of Smith Center, Kansas, a copy of which you sent me.

Your statement "Frankly, it does not help any to take up the time of those charged with the responsibility of administering relief by sending such telegrams without the proper facts to substantiate them," hits the nail exactly on the head.

Since I saw you last Saturday we have more information on the Clay County case, where further investigation discloses the fact that this wire was prompted by the ulterior motive of securing moderation in the terms of the wheat contract.

I am convinced that we will have numerous requests from individuals of excitable nature and who out of various motives, none definitely sincere, will send wires asking for emergency assistance. These calls not only take up time but divert our attention from instances where actual emergencies do exist.

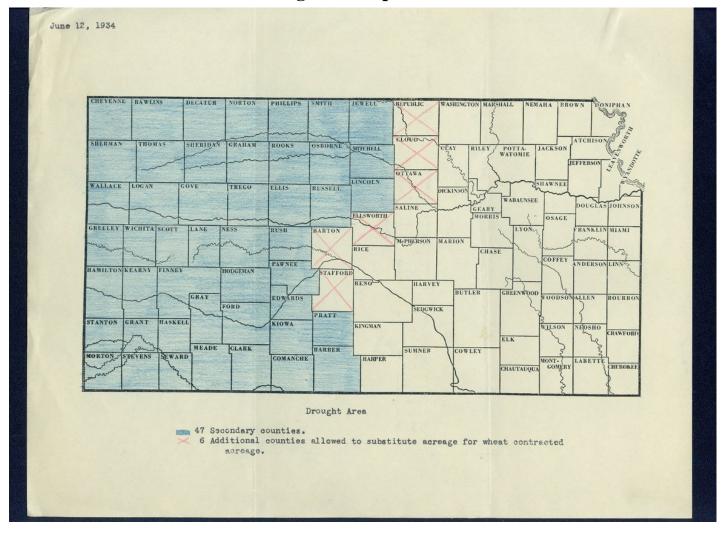

I am convinced that Mr. Stutz has his field situation well in hand and has accurate and up to the minute information. Moreover, our county agents are now again back in their own counties after spending last week here in Manhattan with the 4-H Club boys and girls, and are now at work perfecting the community organizations, a description of which I left with you when I was in Topeka last week. Under these and Mr. Stutz's organization I believe we have better information regarding the situation even in the local community than does any Chamber of Commerce or any individuals who may take it upon themselves to wire emergency calls.

Yours very truly,

Director

Mr. Fred Simmons, President Chamber of Commerce Smith Center, Eansas

Dear Mr. Simmons:

Thanks for your kind letter of June 12th.

I am glad the county-wide survey was started last Seturday. I have no doubt that the situation is serious, and my concern is to see that there is no delay in the functioning of the machinery.

By the time this letter reaches you you will undoubtedly have had a visit from Mr.Stutz and a personal representative of Mr. Harry Hopkins at Washington. They left here yesterday afternoon. I asked them to get in touch with you and the committee of the Chamber of Commerce of Smith Center. You will no doubt have the information from your survey, which will be most helpful in giving the Washington authorities a correct picture of our situation.

I assure you I shall be glad to hear from you at any time about these matters of interest to your community.

With best wishes, I am

Very truly yours.

Governor
