

Modified Bone from the Curry Site, 14GR301

The purpose of this modified bone is not completely understood. The deer-sized bone may have been manufacturing debris left after making another bone tool. The whitened appearance is a result of sun bleaching from being on the surface. It was recovered from the Curry site in Greenwood County and donated to the Kansas Historical Society in 1984.

Date: 1200-1400 CE
