

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Section 32, Pages 931 - 960

This collection contains correspondence regarding indemnities for cattle killed by tuberculosis, concerns over the findings of veterinary inspection, discussion of an outbreak of rabies among Kansas dogs that affected cattle, complaints of veterinary treatments killing animals, and general discussion about livestock diseases. Most of the correspondence is between the Livestock Sanitary Commissioner and various livestock owners throughout Kansas.

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Jan. 21, 1911.

Dr. F. S. Shoneleber,

Manhattan, Kans.

Dear Sir:--

Confirming 'phone message of yesterday, I would be pleased to have you furnish any assistance to the Sherman ranch in Ellsworth County in the way of vaccinating their hogs for cholera.

I have a letter from Dr. G. A. Krueger of Ellenwood asking for serum to use in vaccinating hogs infected with cholera. I have written Dr. Krueger asking for the names of owners and number of herds infected. I would be pleased to know if you consider Dr. Krueger competent to use the serum in the way of vaccination. I do not know anything about him as to his qualifications.

I also have a letter from C. F. Armstrong of Clyde stating that a Mr. Mackinson of his community has about 25 hogs infected with some disease and desires serum sent to Dr. H. C. Gale to do the work. I do not know Dr. Gale, therefore I cannot recommend the serum to be sent to him. If you know him to be efficient and all right to send the serum to, I would be glad to have you do so. If not, I would be glad to have it sent to some one in the community

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

2.

or have some one go from the College and do this work.

Also Dr. Huff of Holton 'phoned in this A. M. asking that his order be filled that he left while in Manhattan something like three weeks ago. Dr. Huff has been using the serum and I presume it is all right for you to send it to him.

Lewis Haggman of Wyandotte County 'phoned in today stating that he had about 70 head of hogs which averaged 140 pounds that were infected with cholera and would like to have them vaccinated. I would like for you to send Dr. Hayes or some one from the College to do this work as it is in the community where the commercial plants are maintained, and I would hope for the best results by reason of this work.

With reference to your letter of the 18th concerning Dr. Cones' work at Lyons, I have no way to tell whether he is using the serum sent him on non-deceased or deceased herds other than his communications to me. He says there is cholera existing in his community and that he is using the serum on the infected herds and has had the best of success. I will make some inquiry as to Dr. Cones'

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

3.

reliability and will advise you later.

I have a request from Mr. Mack Howell of Stafford asking to have his milch cows tested for tuberculosis. Dr. Wallis of that city sent the request in. Would be pleased to have you do this work at your very earliest convenience as he is very anxious to have it attended to.

I have a letter of this date from Dr. Hayes of your department inclosing letter from W. S. Jones of Lynnwood requesting test to be made on their dairy cows. You will please have Mr. Jones cows tested, also Mr. Elder's and Mr. Collins at the same place. They have about 67 head between them.

Very respectfully,

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Dear Sir:

After writing the within I have a 'phone message from F. O. Gatty, Corwin, Kansas, stating he had an outbreak of cholera in a herd of seventy five hogs, and asks to have them vaccinated. Dr. Roach at Anthony is the nearest Veterinary to this outbreak that has been using the serum. Also a phone message from the Harper Drug Company of Harper, Kansas desires to have eighteen head of hogs vaccinated on account of the cholera outbreak. Dr. Roach is close to this point also and can do the work.

At any of the points named within I have requested serum to be sent that there is not a Veterinarian that you could send the serum to, would be pleased to have some one go from the College and do the work, and if no one can go from the College please advise me by phone, so I can send some one else.

Very respectfully,

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF ANIMAL INDUSTRY,
WASHINGTON, D. C.

ADDRESS REPLY TO "CHIEF OF
BUREAU OF ANIMAL INDUSTRY,"
AND REFER TO YY

January 3, 1910¹⁹¹³

Mr. J. H. Mercer,

Live Stock Sanitary Commissioner,
Topeka, Kansas.

Sir:

For your information I desire to advise you that during November, 1910, the following shipments of cattle, received at public stock yards, where inspection is maintained by the Bureau, were found to be affected with seabies:

Name	Address	No.	Origin	Destination
J. Eubanks,	Anthony, Kansas	2	Anthony, Kans.	Wichita, Kans.
P. R. Lowe,	Syracuse,	28	Syracuse,	So. St. Joseph, Mo.
W. W. Davis,	Peabody,	63	Peabody,	do
O. E. Soeken,	Ellenwood,	33	Ellenwood,	Kansas City,
Howe & Walz,	Meade,	207	Meade,	do
M. L. Theis,	Great Bend,	114	Larned,	do

Very respectfully,

Monis Hooden

Associate Chief, Inspection Division.

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

January 24, 1911.

Dr. F. S. Schoenleber,
Manhattan, Kansas.

Dear Sir:-

This will confirm phone message of this date in which we requested that you send 1200 cc's serum to Dr. H. W. Sales of Randolph, Kas.

We also have a request this date from Dr. Cone of Lyons, or rather he would like to know what amount of 100,000 cc's you could supply him with in case he made application within the next few days. Would be pleased to have you write him as to what you can do for him. He states that one man in his community has over 5000 hogs on his ranch and that cholera exists among them, but that the owner does not desire to vaccinate any of them unless he could get serum with which to vaccinate the entire herd. We have advised Dr. Cone we had requested you to write him on this proposition.

You will please test for tuberculosis cows belonging to the following persons:

W. H. Elder, Lawrence, Kas., 10 head; John Holmes, Jr., Linwood, Kas., 7 head; A. A. Jones, Linwood, 41 head; E. Sales, Linwood, 14 head and S. P. Collins of Lawrence, 11 head.

Very truly,

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

January 30, 1911.

Dr. E. Fredenburg,
Council Grove, Kas.

Dear Sir:-

I have your letter concerning the inspection of the Foshier horses at your Stock Yards in Council Grove. You do not state in your letter what has been done with this herd of horses, or what the owner desires to do with them. I will not permit these horses, under the circumstances, to be sold and promiscuously placed around at different places in your community. It will be necessary to hold these horses under quarantine and I will correspond with your Sheriff and instruct him what steps to take.

Further, I desire to know the standing of this man, who shipped these horses in here. From your report of this inspection, the laws of our State have been violated and also the laws of our country. While strangles is not necessarily a very fatal disease, yet, it is a very contagious one, and no man ought to take the chances of bringing a well developed case of that disease into our State. Of course, the railroads have also violated the law by bringing them without a health certificate.

Please advise me what has and is expected to be done with this bunch of horses.

Very respectfully,

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Trinity University
Waxahatchie, Texas
President's Office

May 6, 1911.

Hon. Joseph H. Mercer, President,
State Live Stock Commission,
Cottonwood Falls, Kansas.

My dear Sir:

According to U. S. reports, Canada imported \$1,246,739 worth of live stock in 1910, paying duty upon same; while she imported \$499,449 worth of live stock in 1910 free of duty. Now, will you be kind enough to furnish me the approximate figures for Kansas and the interest of the farmers in the proposed Reciprocity Agreement with Canada? Would you also give your opinion as to this? Does a farmer make more money raising wheat and selling it at the market price than by raising corn on a large scale and raising stock? Would you venture an opinion of the Kansas live stock men or the Kansas farmers in general on this proposition?

If you would be so kind, also to send me such literature as you may have access to on the live stock industry and its future, I will greatly appreciate receiving it. I will gladly bear the expense of express or stamps, if you will notify me.

Very respectfully,

P/T

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

May 16, 1911.

Mr. Joe G. Terry,
Maxahachie, Texas.

Dear Sir:-

Your communication of the 6th inst. addressed me at Cottonwood Falls has been received and contents of same noted.

I could not say how large a number of cattle Kansas ships to market each year, but, according to statistics, we had in the State, January 1, 1910, Three million Two and sixty thousand head of cattle, not counting milk cows.

In answer to your first question, I would state that in my judgment, at least, nine per cent of the farmers and stockmen of this State are against the Reciprocity Treaty with Canada, now pending before Congress. Second, my own opinion is that it will not reach the aims its friends hope for, and I as a producer of live stock am strongly opposed to the Treaty and the free list Bill following it up.

It is hard to say as to the conditions in our State, for the reason that the central and western portion of our State is a much better wheat growing section than the middle and eastern portion, and the eastern and central portion of the State is largely made up of corn raising and stock fattening. So far as the money making value of the proposition is concerned, there is but little difference.

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Mr. Terry -2-

I have no literature that would be of any advantage to you, but if you will take this proposition up with the Agricultural Department at Washington, D. C., they no doubt could give you the kind of literature you desire.

Very respectfully,

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

State of Kansas

O. O. WOLF, SECRETARY.

OFFICE OF
STATE BOARD OF VETERINARY EXAMINERS.

OTTAWA. May 16, 1911.

Hon J. H. Mercer,
Topeka, Kansas.

Dear Sir:-

On the 11th Inst. I examined the 406 head of cattle at Sedan , Kans owned by Brown and Gillan , Big Springs, Texas.

On the 25th of April they were unloaded at Sedan and driven to Mr. P. P. McKey's pasture about ten miles from Sedan. On the 4th of this month(May) the first one died and up to the 11th 19 have died in all. Five more are sick.

About the last of April or the first of May they were given all the salt they would eat , the salt being placed in a trough to which they had access. It was the best grade of Hutchison salt. A day or two after they were given the salt some of them were noticed to scour and became very gant and manifest apparent thirst. They went down rapidly and usually died in a day or two when symptoms were bad but those that were not so accute recovered. All of the bunch did not eat of the salt when they were first salted and at different times others have went to it that had not been to it previously. The symptoms manifest were those of diarrhea or disentary, scouring , great emaciation eyes sunken in , loss of appetite , increased frequency of pulse, and a normal or sub-normal temperature,;postmortum examination showed signs of some irritant to the digestive tract , the mucous lining of the rumen and intestine being easily detached, spleen and liver practically normal. There was quite a number of native cattle in the same pasture and they were in apparent

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

State of Kansas

OFFICE OF
STATE BOARD OF VETERINARY EXAMINERS.

O. O. WOLF, SECRETARY.

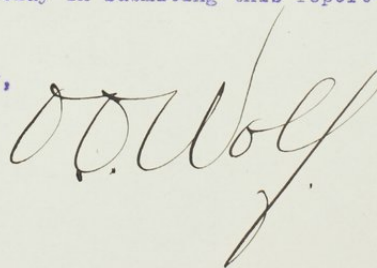

OTTAWA.

#2.

health. I expressed the oppinion that the trouble was due to the salt, or perhaps it would be better to say the Chlorine contained in the salt. It is probable the these southern cattle had not been accustomed to salt and eat more than was good for them . It is likely that there will still be some further loss as the party that had charge of the pasture stated that on the day previous to my viset that quite a number of them if not all that had not as yet found the salt had been up and filled up on it. I advised or rather suggested that the salt be taken out of the trough and rock salt substituted in its stead or entirely removed, but I also suggested that if they were sure that they had all been to salt that it would be just as well to leave it as it was as all the harm had been done ~~Inhavoméd lakeylfoåæw~~ where a loss has resulted from the same cause as this but have not met so heavy a loss still the percent has been about the same.

Please pardon the delay in submitting this report but it has been unavoidable.

Yours truly,

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Garden City

Dear Doctor

Am writing you this date in regards to the new laws ,Governing the testing and disposal of tuberculis cows I am very desirous of a copy,as soon as it is possible to secure one,as I have started the Dairymen and others here t to having their dairy cows tested,Have tested 26 head to date and have several more on my books.

If there is any chance I would like very much to keep this work going,as you know it is hard to start after once stopi ing,and I would also like to secure the authority to do the testing myself as I am doing at Present under the supervision of the Agriculterial college.

Hoping to hear from you in the near future regards this matter and thanking you in advance for any favors.

I Am

Yours Resp.

E.E. Flory D.V.S.

Gordon City,
 May 18-11.
 Dr. J. E. Brown, President of the Live Stock Sanitary Board,
 Topeka, Kansas.
 Dear Doctor:
 Am writing you this date in regard to the new
 laws governing the testing and disposal of tubercular cows.
 I am very desirous of a copy, as soon as it is possible to
 secure one. I have started the dairymen and others here
 in having their dairy cows tested. Have tested 25 head so
 far and have several more on my books.
 If there is any chance I would like very much to keep this
 work going as you know it is hard to start after once stop-
 ped. I would also like to secure the authority to do
 the testing myself as I am doing at present under the
 supervision of the Agricultural College.
 Hoping to hear from you in the near future regards this
 matter and thanking you in advance for any favors.
 I am,
 Yours Resp.,
 J. E. Brown.

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

May 23, 1911.

Dr. E. E. Flory,
Garden City, Kas.

Dear Sir:-

Your communication of recent date at hand and contents of same noted.

I enclose you copy of the Tuberculosis Law. I wish to advise that this law was changed somewhat by the last Legislature, but is not yet in effect or will not be until published in the Statute Book, which, I am advised, will be now in a few days. Until the new law becomes effective, we will still operate under the old law. Will send you copy of new law as soon as I get same printed.

Very respectfully,

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

MISSOURI STATE
BOARD OF AGRICULTURE

Veterinary Department

D. F. LUCKEY
STATE VETERINARIAN

COLUMBIA

*Hon J. H. Mercer
Topeka, Kan.*

May 18, 1911.

Dear Sir:-

I am compelled to ask quite a favor of you and hope you will grant it, if possible, by return mail. I am anxious to get the statement asked of you and of other state officials in time to compile and present them to the Board of Agriculture at their meeting about June 1.

On the purest kind of technicality the circuit court of St. Louis granted an injunction on May 11th restraining enforcement of quarantine regulations requiring inspection of cattle shipped into this state. The information asked of you is intended for use in complying with the law technically in the preparation of a new set of regulations. I must furnish the Governor of the state with reliable information to the effect that tuberculosis is prevalent in whatever areas we schedule against.

I wish you would kindly give me forthwith an official letter stating whether or not tuberculosis has been found among cattle in your state, and as far as convenient furnish me a description of the extent of its spread. I assure you in advance that this information will be used exclusively for the sustaining of quarantine regulations which we deem necessary to protect the herds of this state and will under no conditions be used to advertise your state adversely.

Thanking you in advance for this favor, I am,

Very respectfully,

D. F. Luckey
State Veterinarian

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

May 19, 1911.

Dr. D. F. Luckey,
State Veterinarian,
Columbia, Mo.

Dear Sir:-

Your circular letter of 18th inst. at hand.

Wish to advise that Mr. Mercer is out of the
City to be gone until early next week, but on his return,
he will no doubt communicate with you regarding the matter
about which you write.

Respectfully,

Live Stock Commissioner.

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

May 23, 1911.

Dr. D. F. Luckey,
State Veterinarian,
Columbia, Mo.

Dear Sir:-

Replying to your favor of the 18th inst. relative to the tubercular investigation on the part of Kansas, I wish to advise that Kansas passed a tuberculosis law during the Legislature of 1909. Under the provisions of this law, this department has had tested among the dairy herds of the State about 3000 head of dairy cattle. The testing has not been confined to any one locality, but throughout the State, the greater number of head being tested in the eastern and central parts of the State. The results of these tests show less than six per cent of the number tested to be infected with the disease.

Our law requires reacting animals to be disposed of under post mortem, and with but one or two exceptions, the post mortem results show the reacting animals to be infected with the disease.

As to the spread of the disease, we could not give any information, as no efforts have ever been made to determine the existence of the disease prior to a little over a year ago.

Instead of the disease spreading among the dairy herds in our State since the testing has been going on, we feel sure that it has been very largely suppressed, and the people have been

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Dr. Luckey -2-

benefited by receiving better and more wholesome dairy products.

Our Rules only require the tuberculin test to be applied to cattle to be used for dairy purposes coming into the State, but we are of the opinion it ought to cover at least full-blooded cattle to be used for breeding purposes also.

Trusting this is the information desired.

Very respectfully,

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

Osawatomie, Kans.
May 22-11

State Liv. Stock San. Com.
Topeka, Kans.

Dear Sir: Please advise me
as to the following:

A sucking pig, five days old
has taken sick, following symptoms:
Refuses to suck mother, has grown
very poor and weak. Difficult breathing,
a white diarrhoea, stands and
shivers all the time. No discharge from
eyes. All the head seems to be in
perfect health. A neighbor's meat door
lost 95 pigs, from what I under-
stand to be a similar malady.

Phone charges collect if you think
necessary, Home Phone ^{Yours truly} H.K. Godding

Livestock Sanitary Commissioner's Office, correspondence, 1898-1915

May 23, 1911.

Mr. H. B. Godding,
Osawatomie, Kas.

Dear Sir:-

Your communication of the 22nd inst. relative to the sickness of your pig at hand. As it appears from your letter you have only one sick animal and that a very young suckling pig, I would suggest that the best steps to take in a matter of this kind would be to kill the sick pig and bury the carcass. Rake up all litter and burn same, then thoroughly disinfect the premises with carbolic acid, at the rate of six ounces of carbolic acid to each gallon of water. It would also be advisable to scatter lime all over the floor or pen where sick pig has been.

Should any of your other hogs show signs of disease, wire or phone me and I will send veterinarian to make an investigation.

Further, in the way of suggestion, I would advise that you separate any sick animals from your well ones.

Very respectfully,
