

Coyote Bone Awl from the Crandall Site, 14RC420

This bone awl, made from a coyote ulna, was recovered from the Crandall site in Rice County during the 1983 Kansas Archeology Training Program. The awl was used to make holes in soft materials, like hides, and possibly in basket and pottery manufacturing. The Crandall site is a Late Ceramic period site occupied by Great Bend aspect (ancestral Wichita) peoples.

Date: 1500-1800 CE
